PROFILE

Product leader and hands-on builder at the intersection of enterprise AI, data platforms, governance, and platform ecosystems. Lead a $20M+ ARR four-product portfolio at Transcend with ownership of strategy, packaging, architecture, integrations, and enterprise adoption. Recently solo-built Transcend's Snowflake Native App end to end and own API/custom-function integrations into customer data and SaaS platforms. Previously scaled governance products to $10M+ ARR and led global identity and data workflows across 42 engineering teams. Build private AI/RAG systems directly and am developing agent-level permissions and sandboxed execution. Strongest at turning complex enterprise requirements into scalable products with clear commercial outcomes.

CORE STRENGTHS

Enterprise AI & agentic workflows - Data platforms & native apps - Platform APIs & integrations - Governance & access controls - Product strategy & commercialization - 0-to-1 & scale - PLG / adoption - Enterprise SaaS

EXPERIENCE

TRANSCEND | Series B, 100+ employees — Jun 2023 - Present

Director of Product — Jan 2026 - Present

DSR Automation, Preference Management, Integrations & Consent Management

- Lead a $20M+ ARR, four-product enterprise governance portfolio; set product vision, cross-product roadmap, packaging, and architecture with engineering, design, and GTM leadership. Manage one PM and guide execution across ~15 engineers.
- Solo-built and launched Transcend's Snowflake Native App end to end, syncing consent and preference decisions into customer Snowflake and enforcing them through Row Access Policies and masking; own schema-drift handling, permissions, and in-warehouse reliability.
- Own enterprise integrations across Snowflake, GCP, and customer SaaS through direct APIs and custom functions, embedding governed workflows into the systems customers already operate.
- Translate enterprise requirements for controls, deployment, audit evidence, and operational reliability into reusable platform capabilities rather than customer-specific exceptions.

Staff Product Manager - Data Privacy, Governance & AI — Aug 2024 - Jan 2026

- Scaled Preference Management, DSR Automation, Assessments, and Inventory to $10M+ ARR, setting product direction across governance, automation, enterprise workflows, and commercialization.
- Made Preference Management the fastest-growing product in company history (~$1.5M average ACV), adopted by enterprises including OpenAI, Costco, Yum! Brands, Universal Music Group, and Notion.
- Built and scaled privacy, security, and risk Assessments; integrated ServiceNow and Jira so findings became tracked remediation workflows with clear ownership, status, and evidence inside customers' existing systems.
- Rebuilt DSR Automation through product-led delivery, increasing NPS by 50% and shortening onboarding by 70% while preserving enterprise governance and operational controls.

Senior Product Manager - Privacy Products — Jun 2023 - Aug 2024

- Built Assessments from 0 to 1, reaching 10+ enterprise customers in year one, including Reddit and Informa; productized policy, evidence, and approval requirements into repeatable workflows.
- Built Preference Management from 0 to 1, establishing the product and workflow foundation for what became the company's fastest-growing line.

EXPERIENCE (CONTINUED)

CUSTODIA

Founder & Principal Consultant - Enterprise AI & Governance

- Shipped Sentinel, self-managed private-AI/RAG systems for sensitive healthcare and enterprise data; own model selection, retrieval architecture, provisioning, deployment, updates, and operation outside conventional SaaS environments.
- Building agent-governance capabilities with sandboxed execution environments and agent-level permissions that constrain what autonomous agents can access and change.
- Shipped AI-governance software for impact assessments, records of processing, and ML-enabled workflows; translate governance requirements into product behavior rather than static policy.
- Exeris (life sciences): 12-month engagement on an ML system for estimating production and sourcing costs of complex pharmaceutical molecules.

LIVERAMP | Public company, 1,500+ employees — Sep 2021 - Jul 2023

Lead Product Manager - Data Privacy — Oct 2022 - Jul 2023

- Cut DSR cycle time by 50% by consolidating 71 team processes into one asynchronous Pub/Sub workflow across global data flows touching 42 engineering teams - turning fragmented operational logic into a reusable platform capability.
- Shipped identity-resolution APIs and regionalized data stores, delivering ~20% faster audit completion and 25% better database performance while meeting jurisdiction-specific data requirements.

Senior Product Manager - Data Privacy — Sep 2021 - Oct 2022

- Built global Data Subject Rights workflows and partnered with Data Ethics, Engineering, and Commercial on privacy-by-design, identity, data architecture, and platform integrations.

ENKLU | Seed-stage, employee #6 — May 2019 - Mar 2020

Senior Product Manager

- Built B2B AR SaaS from 0 to 1: customer discovery, product strategy, roadmap, pricing, and first enterprise pilots. Operated with direct product ownership in an early-stage startup environment.

INDEPENDENT BUILDING

pagebolt.dev: independently built and operate a developer-facing web-capture and agent-visibility API for screenshots, PDFs, narrated demos, and visual diffs - hands-on product, implementation, and operation.

EDUCATION

University of California, Berkeley | B.A. Rhetoric, Highest Honors and Distinction | 2014-2018

SKILLS

Product & commercial: enterprise product strategy, 0-to-1 and scale, pricing / packaging, PLG, enterprise GTM, customer discovery, OKRs, adoption analytics. **Platforms & data:** Snowflake Native Apps, Row Access Policies / masking, direct SaaS APIs, custom functions, Pub/Sub, GCP, identity-resolution APIs, ServiceNow / Jira.

AI & governance: RAG, private AI, sandboxed execution, agent permissions, AI impact assessments; data governance, IAM / tenant-scoped controls, audit evidence, self-managed deployment, HIPAA, ISO 27001, CCPA, GDPR.
